PROFESSIONAL SUMMARY

Frontend Developer with 4+ years of experience building scalable high-performance Single Page Applications (SPA) using Angular, React.js & Next.js. Skilled in component-based architecture, state management (NgRx, Redux Toolkit), WebSocket and REST API integration, delivering responsive and cross-browser compatible web applications.

Experienced in developing real-time platforms, admin dashboards, and optimizing performance through lazy loading, code splitting, and efficient UI design.

EXPERIENCE

Autotroph Infotech — Frontend Developer

MAY 2024 – APRIL 2026

- Built client-facing applications using Next.js with SSR and developed React.js admin dashboards for efficient data management and improved performance
- Integrated REST APIs and WebSocket technology to enhance real-time functionality.
- Developed reusable Angular and React components improving development efficiency.
- Implemented white-label solutions with customizable themes including light and dark mode support
- Validated cross-browser compatibility and optimized responsive design across multiple devices.

Infeon It Services — Software Developer

FEB 2022 – APRIL 2024

- Developed Angular components, CRUD modules, and reusable UI elements to enhance application functionality.
- Developed and deployed comprehensive Angular applications for retail and political sectors.
- Integrated PrimeNG components and developed complex form validations.
- Contributed UI/UX discussions and maintained consistent branding across modules.
- Worked on performance optimization, accessibility compliance, and cross-browser support.

SKILLS

Frontend Technologies: Angular, React.js, Next.js, JavaScript and TypeScript

UI Framework: Angular Material, PrimeNG, Bootstrap

Web development: HTML5, Responsive Design, Cross-Browser Compatibility

Concepts & Architecture: REST APIs, WebSocket, Lazy Loading, Axios

State Management Reactive programming: NgRx, Redux Toolkit, RxJS

Tool & version control: Git, Bitbucket, VS Code, Postman

PROJECTS

I Gaming Platform

- Developed multiple white-label gaming platforms with customizable themes and client-specific configurations
- Built category-based game listings, authentication flows, payment integrations, and responsive gaming interfaces
- Implemented iframe-based game launching and dynamic content rendering modules
- Developed reusable UI components improving scalability across multiple gaming products
- Integrated real-time functionality for user interactions and live updates
- Optimized performance using lazy loading, reusable architecture, and responsive design principles

Chatbot – Customer Support & Admin Management System

- Developed a real-time customer support platform with separate Customer and Admin panels for managing customer interactions
- Built role-based access control supporting multiple user types including Master Admin and Agents with permission-based page access
- Implemented multi-bot management functionality enabling chatbot integration across multiple websites and platforms
- Developed real-time messaging functionality between customers and support agents for instant communication
- Built chatbot customization modules allowing admins to configure themes, fonts, colors, predefined messages, and UI settings
- Created agent support modules enabling query handling, conversation management, and efficient customer issue resolution

Mariomint – Crm-b2b

- Developed campaign automation modules for managing customer acquisition and engagement workflows
- Built functionality to import customer datasets in bulk and categorize users based on registration status, deposits, and first-time deposit activity
- Implemented automated messaging workflows using Email, SMS, and WhatsApp templates for targeted campaigns
- Developed hierarchy-based automation triggers enabling multi-level customer journeys based on user actions and events
- Built scheduled campaign execution workflows supporting hourly, daily, and monthly automated campaigns
- Implemented customer validation logic to identify existing users and create separate communication flows for new and existing customers

Smart Office – Office Management Platform

- Developed an Angular-based web application for politicians to manage meetings, visits, and events.
- Implemented event scheduling, record tracking, and dashboard modules for better organization.
- Built responsive UI using Angular Material ensuring accessibility across devices.
- Optimized application performance using lazy loading and reusable component architecture.

EDUCATION

MGM'S College of CS & IT, Nanded — MSC (SE)

AUG 2018 - JUNE 2021

MGM'S College of CS & IT, Nanded — BSC(CS)

MAY 2015 - JUNE 2018
